## OUTPUT:

The screenshot shows the WOKWI simulation interface. On the left, the sketch.ino file is open, displaying the following code:

```

1 #include <WiFi.h> //library for wifi
2 #include <PubSubClient.h> //library for MQTT
3 #include "DHT.h" // library for dht11
4 #define DHTPIN 15 // what pin we're connected to
5 #define DHTTYPE DHT22 // define type of sensor DHT 11
6 #define LED 5
7 DHT dht (DHTPIN, DHTTYPE); // creating the instance by passing pin and type of dht connect
8
9 void callback(char* subscribetopic, byte* payload, unsigned int payloadlength);
10
11 //-----credentials of IBM Accounts-----

33 void setup() // configuring the ESP32

```

On the right, the simulation window shows an ESP32 microcontroller connected to a DHT22 sensor. The terminal output displays the following data:

```

Sending payload: {"temperature":51.40,"humidity":86.00}
temperature:51.40
Humidity:86.00
Sending payload: {"temperature":51.40,"humidity":86.00}

Sending payload: {"temperature":51.40,"humidity":86.00}

```

The screenshot shows the IBM Watson IoT Platform dashboard. The top navigation bar includes 'Browse', 'Action', 'Device Types', and 'Interfaces'. A sidebar on the left contains icons for various functions. The main content area displays a table of devices, with the first device (ID 12345) highlighted. Below the table, the 'Recent Events' tab is selected, showing a stream of data points.
